Wiring Interface

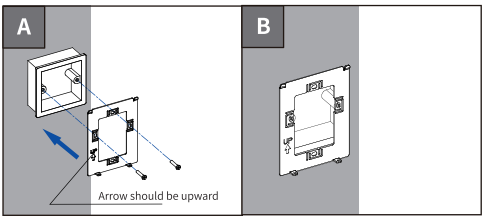

To protect the device from potential damage caused by over-voltage, it is recommended to wire a diode into the circuit. Connect the anode of the diode to the negative cable of the lock, and connect the cathode of the diode to the positive cable of the lock.

Installation

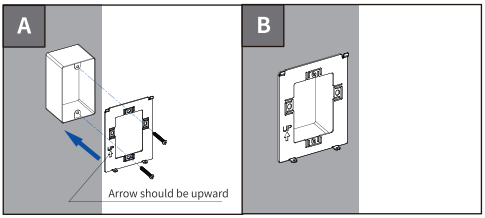

Step 1: Bracket Installation

With 86 junction box in the wall

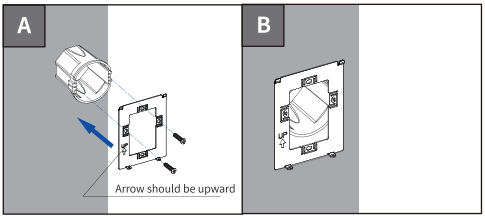

Fix the **wall-mounting bracket** on the 86 junction box with two **M4x20 crosshead screws**, please ensure the bracket against to wall.

With 118 junction box in the wall

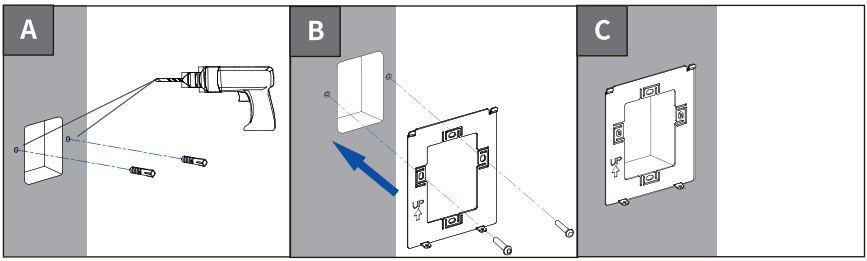

Fix the **wall-mounting bracket** on the 118 junction box with two **#6-30 Philips machine screws**, please ensure the bracket against to wall.

With round junction box in the wall

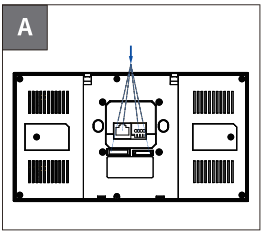

Fix the **wall-mounting bracket** on the round junction box with two **ST3x20 crosshead screws**, please ensure the bracket against to wall.

Without electrical junction box in the wall

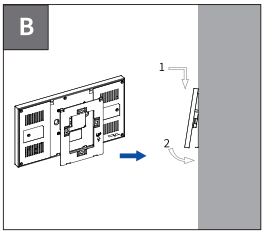

a. According to the position of wires, use a 6mm electric drill to make two 20mm-depth holes horizontally.
b. Then insert two **plastic wall anchors** into the holes. Please make sure that the top of plastic wall anchors can not be higher than wall.
c. Fix the wall-mounting bracket on the wall with two **ST4X20 crosshead screws**, please ensure the bracket against to wall.

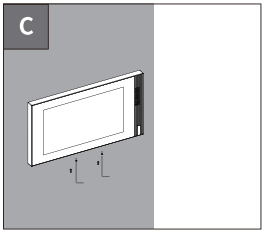

Step 2: Device Mounting

Plug the cables from the wall into corresponding interface on the back cove. (For details, refer to "Wiring Interface")

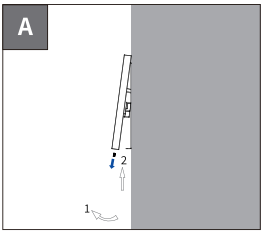

a. As picture shown, tilt the device 15°and line up the holes on the back cover with the hooks on the bracket.
b. Press the device into the brackets and slide down. Then push the device until it against the wall.

Use **Crosshead screwdriver** to secure two **M2x5 hex socket screws** into the bottom of the device. Check the device if is stable, and the installation is done.

Device Removal

a. Use **Crosshead screwdriver** to remove the two **M2x5 hex socket screws** on the bottom of the device.
b. Tilt the device 15° as shown in the picture and push up it to remove the device.
